IDENTIGUARD AI

AI-Powered Identity Verification & Public Safety Platform

One Identity. Safer Communities. Faster Protection.

Professional project proposal | India | Synthetic demonstration data only

Secure identity verification, missing-person protection and authorized emergency response support.

Real integrations, biometric hardware and government verification channels proposed or subject to approval.

The Identity and Safety Gap

1

Lost or forgotten documents

4

Elderly people at risk

2

Missing children and adults

5

Children needing assistance

3

Separated trafficking victims

6

Impersonation and document fraud

IDENTIGUARD AI

Secure • Private • Authorized

AUTHORIZED RESPONDERS
Police & Field Units

HOSPITALS & HEALTHCARE
Patient Care & Reunification

APPROVED INSTITUTIONS
NGOs, Child Welfare & Government Bodies

How IDENTIGUARD AI helps

Authorized organizations can verify identity, support missing-person investigations and coordinate safer responses without unrestricted public biometric searching.

Designed around consent, privacy, security, accuracy and authorized access.

How the System Works

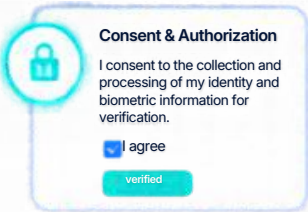

1

USER

Registration: the individual voluntarily registers through an approved process.

2

CONSENT / AUTHORIZATION

Identity verification: approved document methods or synthetic demonstration records are used.

3

BIOMETRIC SCANNER

Biometric enrollment: biometric templates are securely processed using approved technology.

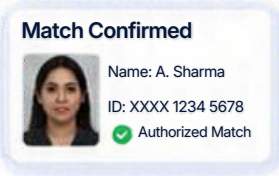

4

SECURE VERIFICATION SERVICE

Identity matching: the sample is checked only against records the organization is legally permitted to access.

5

AUTHORIZED IDENTITY MATCH

6

SAFETY CHECK

Safety check: authorized missing-person alerts or relevant safety records are checked.

7

RESULT

Result: Identity verified, Identity not verified, Manual review required, Potential missing-person case match, or Verification unavailable.

Never display a suspected criminal identity or accuse someone based only on an AI match.

Biometric matching is not unrestricted discovery of identity from a government database.

Biometric and Document Verification

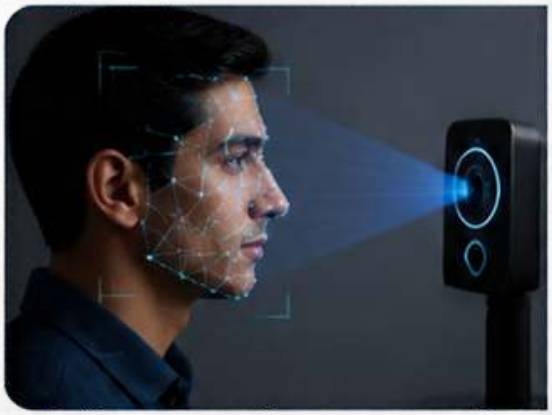

FINGERPRINT VERIFICATION

- Capture
- Image quality check
- Template extraction
- Secure matching
- Confidence score
- Anti-spoofing protections

SECURE TEMPLATE

VALIDATED

FACIAL VERIFICATION

- Camera capture
- Liveness verification
- Reference image comparison
- Match confidence
- Manual review when uncertain

LIVENSS: OK

VALIDATED

IRIS VERIFICATION

- Iris pattern recognition
- Specialized hardware required
- MVP: UI demonstration only
- Future: approved iris scanner integration

VALIDATED

DOCUMENT VERIFICATION

Aadhaar verification must use an authorized UIDAI-compliant process. PAN and driving licence verification must use permitted verification channels. Demonstrations use synthetic, masked records only; display the minimum information needed.

Protection Modules: SAFESearch and TRUSTCHECK

IDENTGUARD SAFESEARCH

AI-powered missing-person support for authorization casea team.

CASE OVERVIEW

AUTHORIZED CASE TEAM ONLY

Case reference number

SS-2025-7A8B-0192

- Last-known location submitted only to the case team
- Secure emergency contact information
- Verified family or guardian contact workflow

POTENTIAL MATCH (REVIEWED)

REVIEWED

Potential match identified by AI and reviewed by authorized case officer.

Visibility: Authorized team only

PAFESEARCH FEATURES

- Authorized missing-person registration
- **Photograph and description**
- Case reference number
- Last-known location submitted only to the case team
- Secure emergency contact information
- Authorized identity-match notifications
- Case progress tracking
- Verified family or guardian contact workflow
- Case closure after authorized confirmation

PROTESEARCH FOCUSED ON

- Children
- Women and men
- **Elderly people**
- **People with memory-related difficulties**
- Vulnerable individuals

IDENTGUARD TRUSTCHECK

AI-powered identity verification and integrity protection for authorized operations.

Document validation

Verify identity documents for authenticity and integrity.

Duplicate-record investigation

Identify and investigate potential duplicate identity records.

Suspicous verification activity detection

Detect unusual or high-risk verification patterns for authorized review.

Authorized election-integrity workflow

Support secure, lawful election workflows operated by the appropriate election authorities.

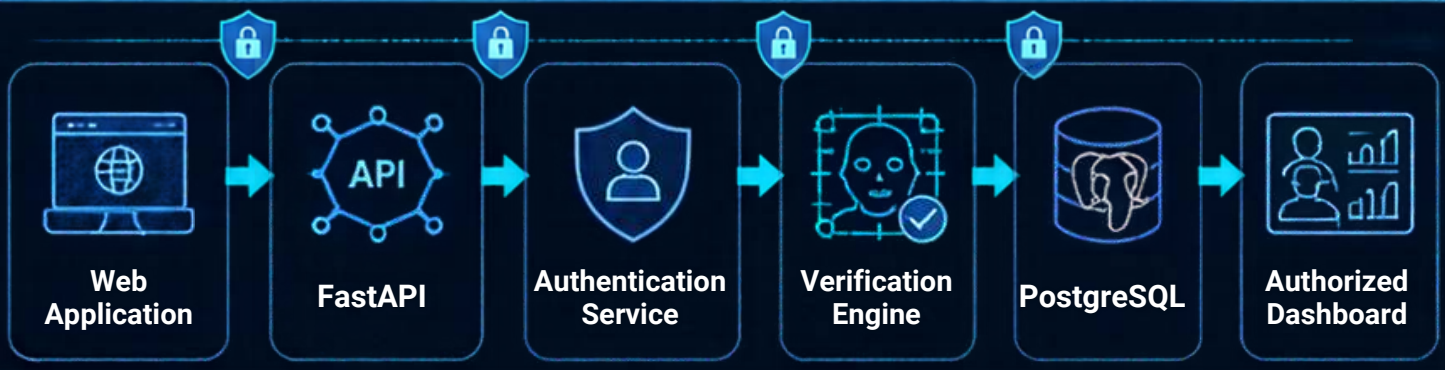

TRUSTCHECK FEATURES

- **Identity impersonation prevention**
- **Duplicate identity-record investigation**
- **Document verification**
- Suspicous verification activity detection
- **Authorized election-integrity workflows**

Possible matches require authorized human review.

Never expose confidential location or family information publicly. Election-related workflows require approval and operation by the appropriate election authorities under applicable law.

Secure Architecture and Authorized Roles

Web Application → FastAPI → Authentication Service → Verification Engine → PostgreSQL → Authorized Dashboard

AUDIT LOGS

- ACCESS EVENT
- DATA ACCESS
- DATA ACCESS
- AUTHENTICATION
- DATA CHANGE
- CONSENT RECORD

Frontend	HTML, CSS, JavaScript, React recommended for production
Backend	Python, FastAPI, REST APIs
Database	PostgreSQL
AI	OpenCV, face verification model, biometric matching interface, AI-assisted case matching
Security	HTTPS, encryption, role-based access control, multi-factor authentication, audit logging, consent management, secure session management
Deployment	Docker, cloud infrastructure, secure database hosting, monitoring and backup

AUTHORIZED ROLES AND ACCESS

Citizen
Access personal verification status and case updates with consent enabled.

Citizen
Create and view cases, initiate verifications and access authorized records.

Hospital / Institution
Verify identities for admissions and case reporting with assigned permissions.

Administrator
Manage users, roles, permissions, system settings, and integrations (configuration only).

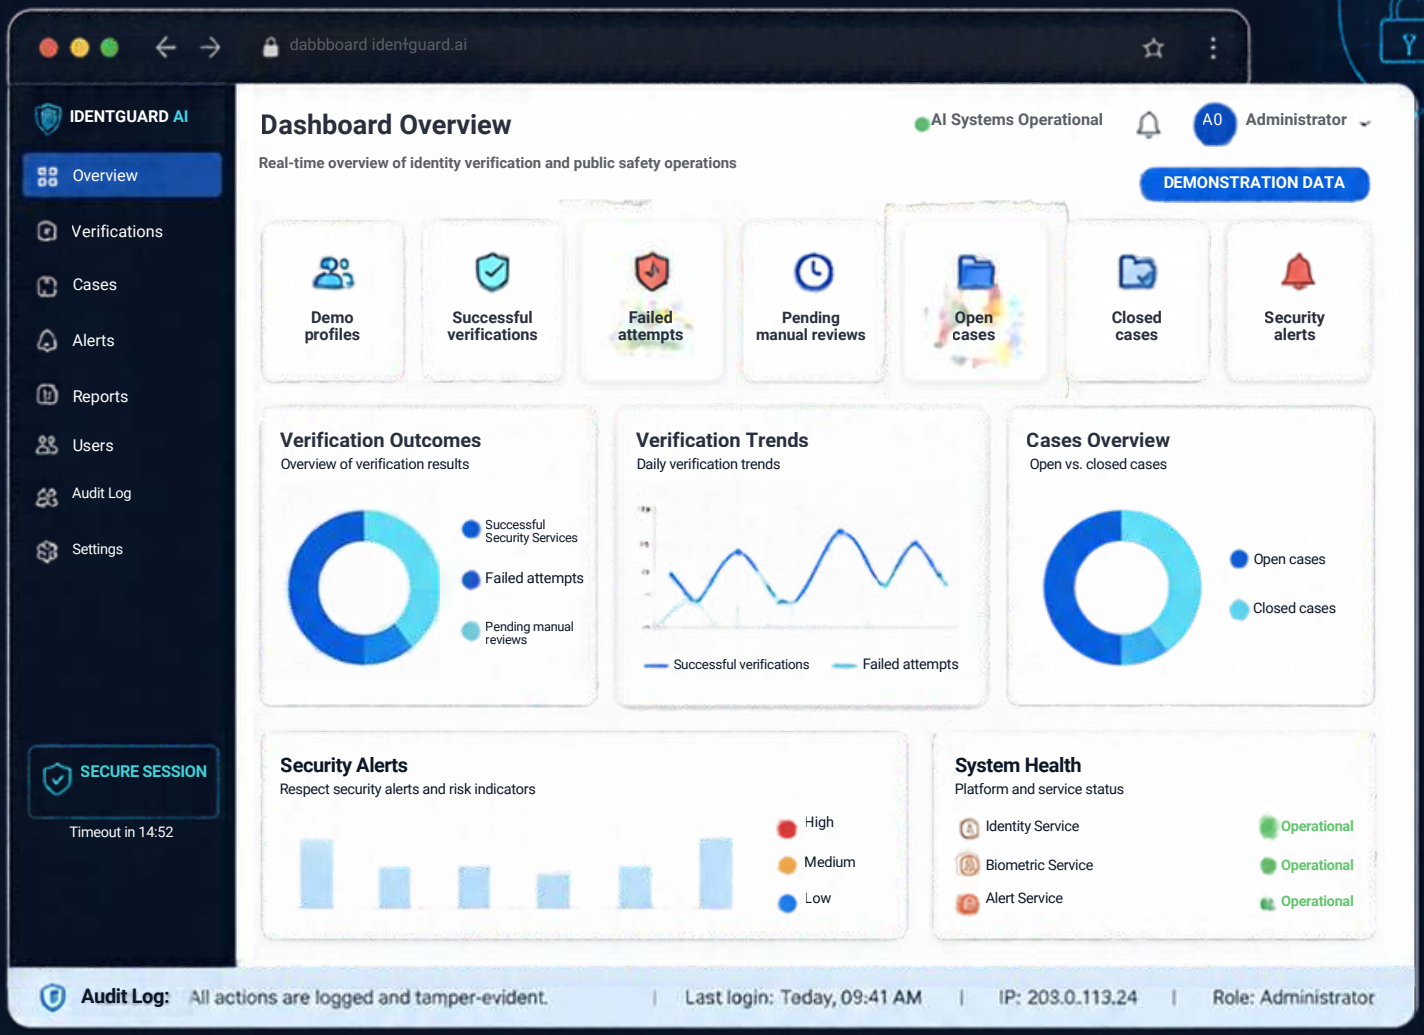

Auditor
View audit logs and system activity for compliance and oversight purposes (read-only access).

Synthetic demonstration records in the MVP; production integrations require approvals, secure infrastructure and legal review.

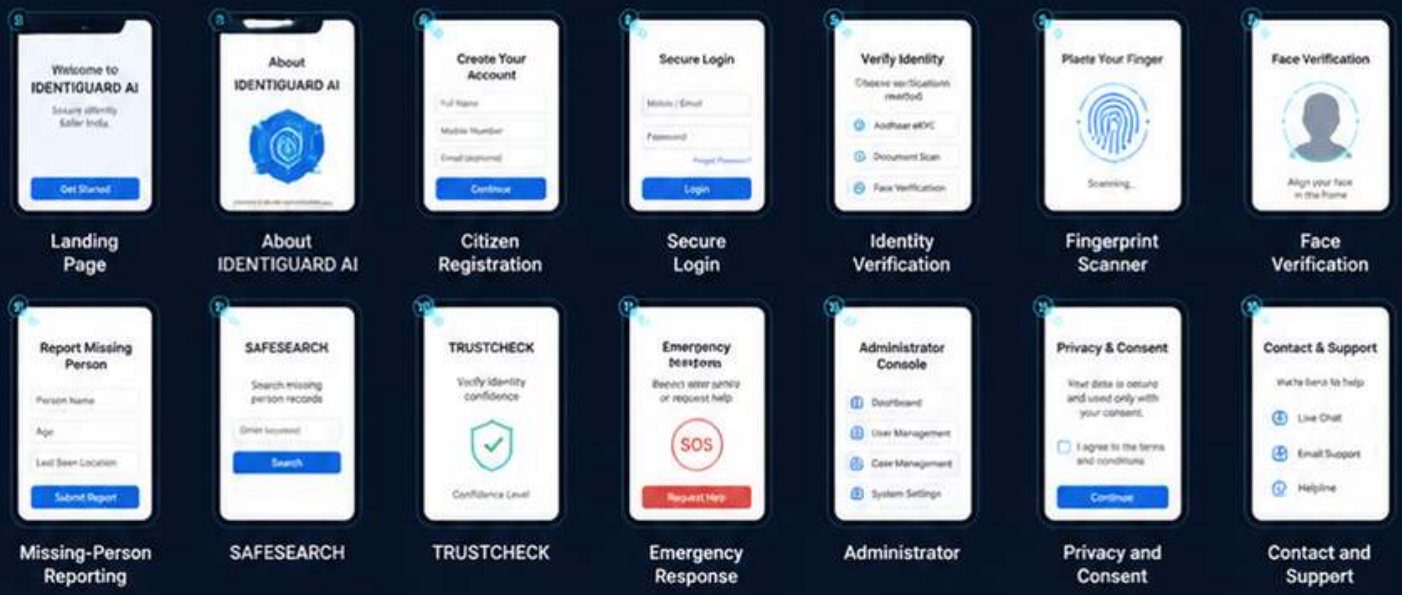

Responsive Product Experience

A secure, accessible workflow for citizens and authorized institutions

IDENTGUARD AI
Secure Identity. Safer India.

Consistent experience across every screen and device

Product design principles

Secure by design
Privacy, consent and encryption at every layer.

Human-centered
Simple, inclusive and accessible for every citizen.

Transparent
Clear prompts, statuses and auditability.

Interoperable
Standards-based integration across institutions.

Scalable & Reliable
Built for scale, resilience and continuous trust.

All prototype records are synthetic. Production data access is restricted by role, consent, law and institutional authorization.

Privacy, Consent and Cybersecurity

PRIVACY CHECKLIST

- Informed consent
- Purpose limitation
- Data minimization
- Encryption in transit and at rest
- Secure biometric template handling
- Role-based permissions
- Multi-factor authentication
- Audit trails
- Data retention policies
- Deletion and withdrawal workflows
- Breach response
- Independent security testing

OUR SAFEGUARDS

- Do not store raw fingerprints or iris scans unnecessarily.
- Do not expose Aadhaar numbers, PAN numbers, phone numbers, family relationships or private locations to unauthorized users.
- Do not allow unrestricted searches of the public using biometric information.
- Provide alternative identity verification for people who cannot or do not wish to use biometrics.

DATA & CONSENT LIFECYCLE

1. CONSENT
Clear, informed consent captured and recorded.

2. COLLECTION
Collect only what is necessary for the stated purpose.

3. USE & STORAGE
Use limited to purpose. Secure storage with strong encryption.

4. RETENTION & REVIEW
Retain only as long as required. Do not review and audit.

5. DELETION & WITHDRAWAL
Delete securely when no longer needed or upon withdrawal.

AUDIT TRAIL ACROSS THE LIFECYCLE
Immutable logs of access, changes and actions.

Legal review required under the Digital Personal Data Protection Act, 2023, DDPP Rules, 2025, the Aadhaar Act, applicable UIDAI regulations and other relevant Indian laws.

Real-World Implementation Roadmap

1

Phase 1 – Research and planning:

- Define use cases
- conduct legal review
- identify authorized partners
- finalize security requirements.

2

Phase 2 – MVP development:

- Build frontend
- Build FastAPI backend
- create PostgreSQL database
- implement synthetic identity records
- create simulated biometric scanners.

3

Phase 3 – AI integration:

- Develop face verification
- add liveness detection
- implement biometric matching interfaces
- test accuracy and false matches.

4

Phase 4 – Institutional pilot:

- Seek authorized institutional partnerships
- conduct controlled testing
- perform privacy and security audits
- evaluate real-world performance.

5

Phase 5 – Production deployment:

- Obtain required approvals
- integrate approved verification services
- deploy secure infrastructure
- establish operational support.

Future capabilities are proposed and approval-dependent.

Sustainable Model, Honest Constraints

BUSINESS MODEL ECOSYSTEM

Stakeholder Ecosystem

Revenue Pathways

- Institutional SaaS subscriptions
- Authorized enterprise licensing
- Hospital and institutional deployment
- Government-approved technology partnerships
- Identity verification infrastructure services

RISK MATRIX & MITIGATION

RISKS	MITIGATION
False positives and false negatives	human review and measured accuracy testing
Spoofing attacks	liveness and anti-spoofing controls
Idenity theft and breaches	encryption, restricted access and incident response
Unauthorized surveillance	consent, purpose integration and access controls
Misuse of missing-person information	confidential case workflows
Hardware compatibility	certified integration testing
Legal and regulatory approval	legal review and phased pilots
Integration costs	modular architecture and partner planning

Do not assume government contracts or integrations are already approved.

The Proposed Web Application

1 Laurning page

@identifugard

Trusted Identity. Safer India.

All content (oral, in, or online, and public-oral) is protected in public and is 100% consents and 100% consents of that.

UI LEGEND

- MVP: simulated scanners and synthetic records
- Future: approved hardware and permitted verification services

PRODUCT PRINCIPLE

Clear roles. Explicit consent. Minimal data. Human review when uncertain.

A Safer, More Responsible Identity Future

IDENTIGUARD AI is not just an identity verification platform. It is a technology vision focused on helping protect vulnerable people, supporting identity verification and connecting authorized responders with the information they need — securely, responsibly and intelligently.

Built with synthetic data for demonstration. Real-world deployment requires consent, security controls, human oversight, legal review and authorized partnerships.

Identity verification should support people, not replace judgment.
